No kidding! I don't remember having seen this comparison graphically depicted before. I decided to go back and look at what kind of temperature increase was recorded at those sites where they either nailed the prescription, or were very close. The sites were 5203, 5204, 5205, 5557, 5559, and 5560. Those units are pretty easy to pick out on the graph below.

Look at the last figure in the powerpoint! I think it shows that the harvest was way less than the prescriptions in FPA – and they still saw an increase in stream temperature!

Greetings,
Attached is a presentation we may use some or all of today.
See you soon,
Jeremy
